Subject: FOLLOW UP QUESTION:: Greenport Municipal Utility Microgrid Project

Please find a follow up question from our team:

1. “What drawings will be provided to the successful bidder upon award?” **The Village has non-digitized drawings of the distribution system, with limited details.**
2. We now understand that the renewable component is part of the scope of this RFP and project. Does it also include need to include energy storage capacity? For pricing of services, a definition of size and location of this renewable component is needed. Is it one of the energy components described in Greenport’s NY Prize Stage 1 Feasibility Study? Please provide further definition of the renewable energy component **The size and type of renewable component are to be decided during the design phase.**

Thank you!
Jennifer
